

Cable Assemblies and Wiring Harnesses

The Electronics Division at Cove Industries has over 25 years of experience in the production of Cable Assemblies, Wiring Harnesses and Looms for Commercial, Industrial, Automotive, Aerospace and Military applications.

Operating to IPC standards and under the control of our ISO 9001:2008 quality system, our trained technicians ensure that all cables are manufactured to a high standard to provide a robust and reliable end product, whether soldered or crimped terminations, for simple data cables to high density contact configurations. This includes fitting sealing boots for harsh environments to exclude water and dust – up to IP65.

Every Cable Assembly and Wiring Harness is then 100% inspected and tested point to point, to check continuity and ensure that it meets specification.

We specialise in Small Batch Production through to larger volumes on either a Build to Print basis, or alternatively we can produce CAD drawings from your requirements specification or modified documentation.

For larger volumes of cables and wiring harnesses we use our wire cut and strip machine to automate part of the process.

Typical examples are:

Commercial

- High Specification shielded data cables
- Wiring Harnesses for Kiosks
- Cable assemblies for medical equipment

Industrial and Automotive

- High Specification Waterproof Cable Assemblies

Aerospace and Military

- Aerospace Test System Harnesses
- Rugged Test Interface cables
- Aircraft Wiring Looms
