

Design Services

Our in house electronics design team can provide a design service from your outline requirement to generate electrical schematics, mechanical drawings and production documentation

Total Solution

Cove Industries is able to provide a one stop shop for ATE requirements, consoles, electromechanical assembly and cable assemblies. From your specification we will produce all necessary wiring, detail and silkscreen drawings in house and in association with Cove Sheet metal, we can capably carry out all metalwork machining, painting and silkscreening. We will then carry out full wiring, assembly and test in house and can also offer an on site installation and commissioning service.

Automatic Test Equipment (ATE)

19 inch racked systems for the Automotive and Aerospace Industries. From an outline requirement we will determine the detailed requirements in terms of standard test equipment and bespoke test fixtures. Fully wired and assembled in house.

This includes the National Instruments Modular Instrumentation range under LabView software control.

Bespoke Electronic Test Units

From your outline or detailed specification we will design electronic test units and fixtures to provide a repeatable semi-automatic test process.

Maintenance, Repair and Installation

We can provide a maintenance and repair facility at customer test cells to support test equipment and provide wiring loom and installation expertise.
